VR1452L - Cholesterol

Objednáací kód: 4304.1001558

VR 1452L

Cholesterol and other lipids is an essential component of the cell membrane. It is located within the surface of the cell. The lipids are produced in the liver and are transported to the rest of the body through the bloodstream.

Heart Risk
 The heart is a muscle that pumps blood throughout the body. It is made up of muscle fibers and is surrounded by a layer of fat. This fat is made up of cholesterol and other lipids. If there is too much of these substances in the blood, it can lead to atherosclerosis, which is a condition where the arteries become narrowed and hardened. This can lead to heart disease and stroke.

Cholesterol Level and Risk of CHD

Age	LDL Cholesterol (mg/dL)	LDL Cholesterol (mmol/L)	LDL Cholesterol (mg/dL)
18-34 years	<100	<2.6	<100
35-44 years	<130	<3.4	<130
45-54 years	<160	<4.1	<160
55-64 years	<190	<4.9	<190
65-74 years	<230	<5.9	<230

Diets
 There are many different diets, but some are more healthy than others. A diet that is high in fruits, vegetables, and whole grains is generally considered to be the healthiest. This is because these foods are rich in fiber, vitamins, and minerals, which are all essential for good health. A diet that is high in saturated fats, such as those found in red meat and butter, is generally considered to be less healthy. This is because these fats can lead to atherosclerosis and heart disease.

Cholesterol and Heart Disease
 Cholesterol is a waxy substance that is found in every cell of the body. It is used to produce hormones and to build cell membranes. However, too much cholesterol in the blood can lead to atherosclerosis, which is a condition where the arteries become narrowed and hardened. This can lead to heart disease and stroke.

Parametry
 Typy posterů Malé laminované postery
 Jazyk popisků Angličtina
 Rozměr 50 x 67 [cm]
 Množstevní jednotka ks

Tento barevný anatomický poster zobrazuje dopady vysokého cholesterolu. Naleznete zde molekulární strukturu cholesterolu a jiné. Jsou zde zobrazeny také různé choroby spojené s cholesterolem a anatomické dopady na orgány.

- Laminovaný poster, 50 × 67 cm
