VR 1452L

Cholesterol and other lipids is an essential component of the cell membrane. It is located within the surface of the cell. The lipids are produced in the liver and are transported to the cells. The cholesterol is used in the synthesis of the cell membrane, for synthesis of the steroid hormones, for synthesis of the bile acids, and for synthesis of the vitamin D.

Heart Risk
 The heart is the most important organ in the body. It pumps blood to all parts of the body. The heart is made of muscle and is very strong. It can pump blood to all parts of the body. The heart is also very sensitive to cholesterol. High cholesterol can lead to heart disease. Heart disease is the leading cause of death in the world. It is caused by a buildup of cholesterol in the arteries. This buildup can lead to a heart attack or stroke.

Cholesterol and Heart Disease
 Cholesterol is a waxy substance found in all cells. It is used to make hormones, vitamin D, and bile acids. It is also used to make the cell membrane. However, too much cholesterol can lead to heart disease. Heart disease is the leading cause of death in the world. It is caused by a buildup of cholesterol in the arteries. This buildup can lead to a heart attack or stroke.

Diabetes
 Diabetes is a chronic condition that affects the way the body uses blood sugar. There are two main types of diabetes: Type 1 and Type 2. Type 1 diabetes is caused by an autoimmune reaction that destroys the cells in the pancreas that produce insulin. Type 2 diabetes is caused by a combination of genetics and lifestyle factors. Both types of diabetes can lead to complications such as heart disease, kidney disease, and blindness.

Arteriosclerosis
 Arteriosclerosis is a condition that causes the arteries to become stiff and narrow. This can lead to a heart attack or stroke. The condition is caused by a buildup of cholesterol in the arteries. This buildup can lead to a heart attack or stroke.

Cardiovascular Disease
 Cardiovascular disease is a condition that affects the heart and blood vessels. It is the leading cause of death in the world. It is caused by a buildup of cholesterol in the arteries. This buildup can lead to a heart attack or stroke.

Cholesterol level and risk of CHD	Age	Male Risk	Female Risk	High Risk
<100 mg/dL	<40 years	<1% (0.5)	<1% (0.5)	<1% (0.5)
100-129 mg/dL	40-49 years	1-10% (0.5)	1-10% (0.5)	1-10% (0.5)
130-159 mg/dL	50-59 years	11-20% (0.5)	11-20% (0.5)	11-20% (0.5)
160-199 mg/dL	60-69 years	21-30% (0.5)	21-30% (0.5)	21-30% (0.5)
200 mg/dL or higher	70 years or older	31-40% (0.5)	31-40% (0.5)	31-40% (0.5)

Cena bez DPH	598,00 Kč
Cena s DPH	723,58 Kč
Parametry	
Typy posterů	Malé laminované postery
Jazyk popisků	Angličtina
Rozměr	50 x 67 [cm]
Množstevní jednotka	ks

Tento barevný anatomický poster zobrazuje dopady vysokého cholesterolu. Naleznete zde molekulární strukturu cholesterolu a jiné. Jsou zde zobrazeny také různé choroby spojené s cholesterolem a anatomické dopady na orgány.

- Laminovaný poster, 50 × 67 cm
